01 WHAT IS DONE NOW

What passed in one run

Public Render release **6836b46** and local confirmation branch **01b01e5**. Test activity used fictional data and PayPal Sandbox.

43 backend tests + 22 browser tests passed. The production build passed. The public planner works, and the AI and PayPal providers responded to separate smoke checks.

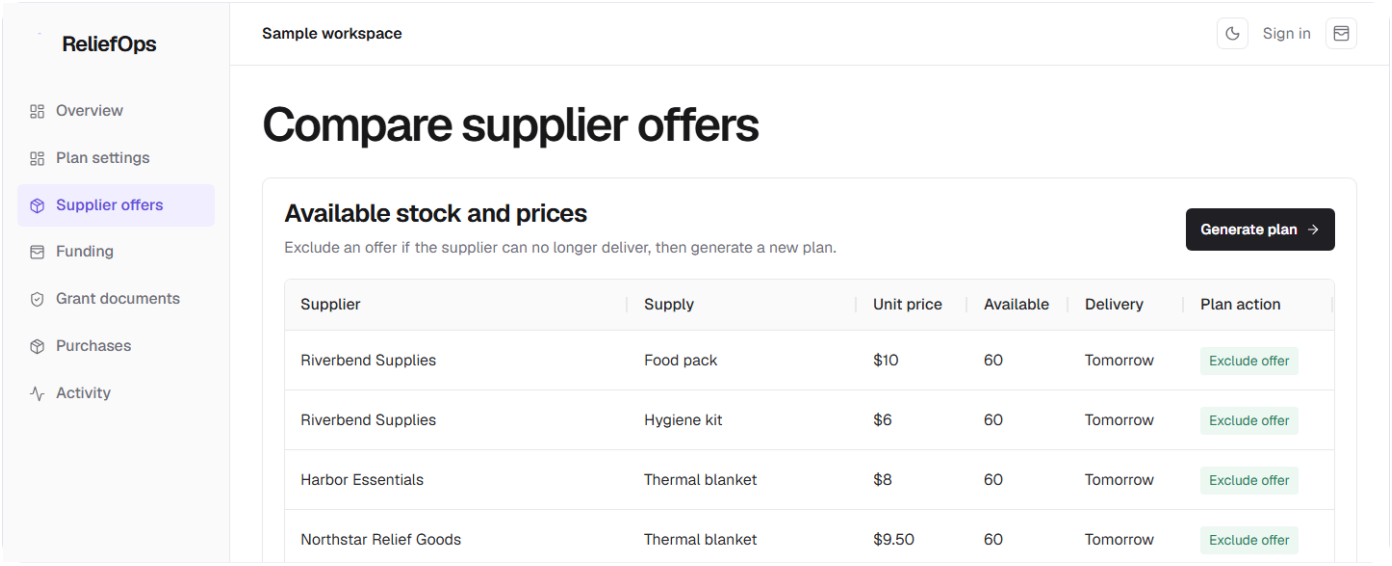

FEATURE	RESULT	WHAT THE CHECK ESTABLISHED
Public demo	LIVE PASS	Render served the workspace and returned HTTP 200 from the health endpoint.
Planning & suppliers	LIVE PASS	The AG Grid offers table loaded. The plan covered 60 kits for $1,440. Excluding Harbor Essentials switched blankets to Northstar and raised the total to $1,530.
Grant extraction	PROVIDER PASS	ReliefOps extraction code called Groq GPT-OSS 120B with a fictional document. The response cited the source and returned a $125 food-only grant using 1,129 tokens.
PayPal checkout	PARTIAL	The real sandbox API created a USD $1.00 order and returned a sandbox approval link. The order was left uncaptured. The hosted webhook rejected unsigned input with HTTP 400.
Saving & sign-in	PARTIAL	Hosted OAuth redirected to Google. Browser tests covered callback, saving, reopening and sign-out with mocked account responses. A fresh live Google sign-in was outside this pass.
Grant review & approvals	TEST PASS	Browser tests verified quote review, confirmation, purchase reservations and cancellation using mocked cloud responses. Local PostgreSQL tests covered financial state and concurrency.
Themes & confirmations	TEST PASS	Light and dark desktop and mobile checks passed. The local branch passed Escape, cancellation and focus restoration checks for the in-app approval. Render still serves the prior UI release.

01 WHAT IS DONE NOW

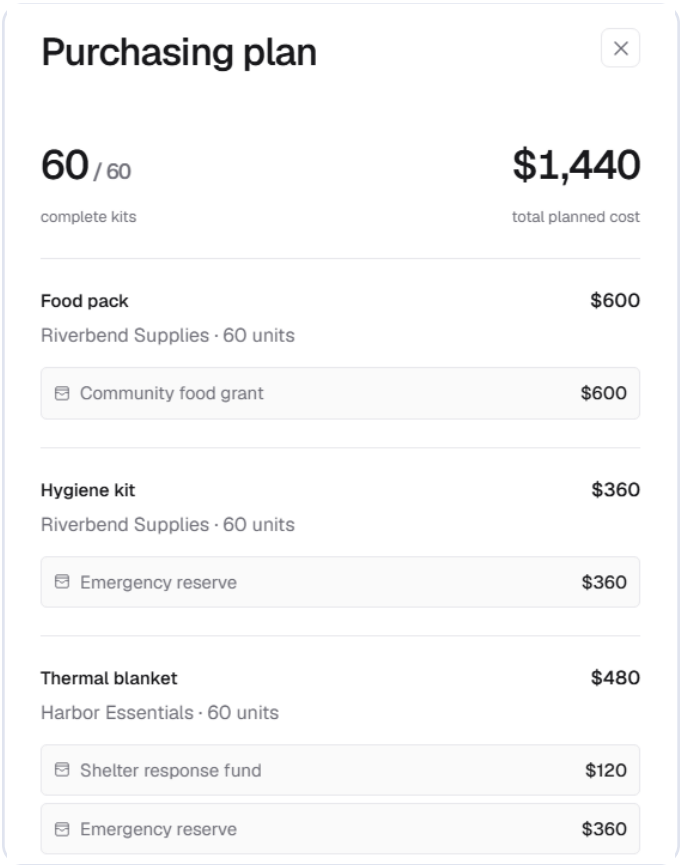

Live planning evidence

Captured from the public Render site during this pass. Both runs use the same fictional flood response.

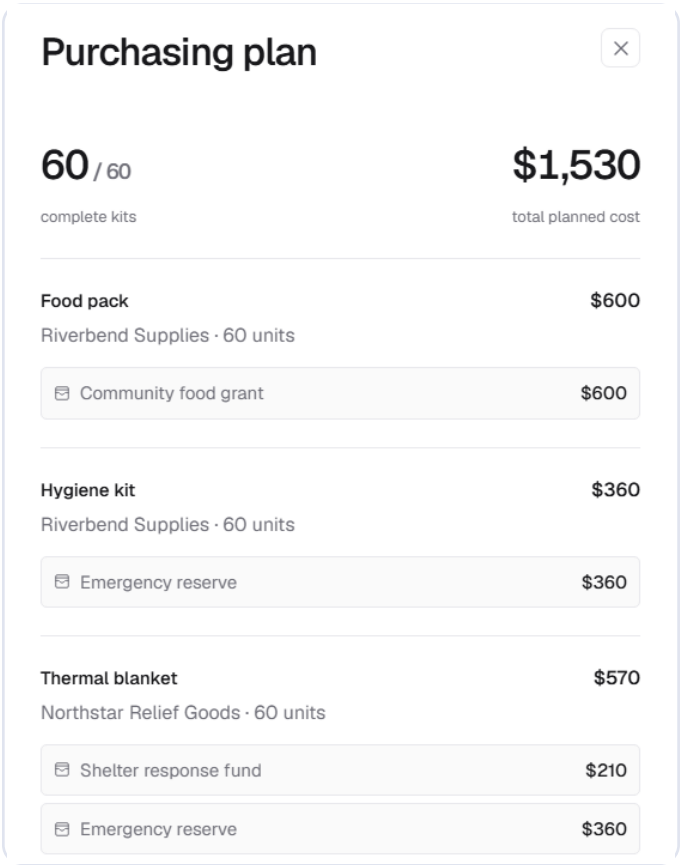

01 / Supplier offers in AG Grid. The table is where Harbor Essentials was excluded.

02 / Original plan

60 kits for $1,440. Harbor Essentials supplies the thermal blankets.

03 / After supplier exclusion

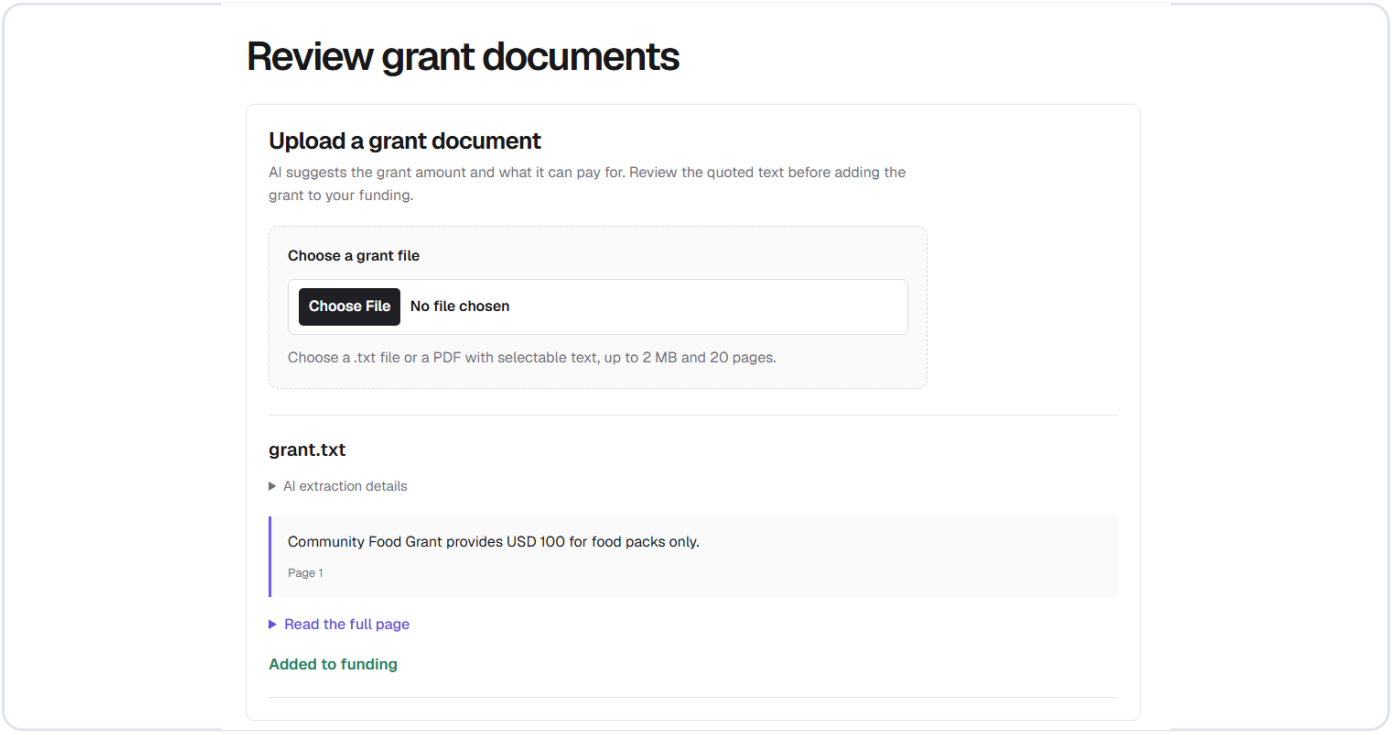

60 kits for $1,530. Northstar supplies the same 60 blankets.

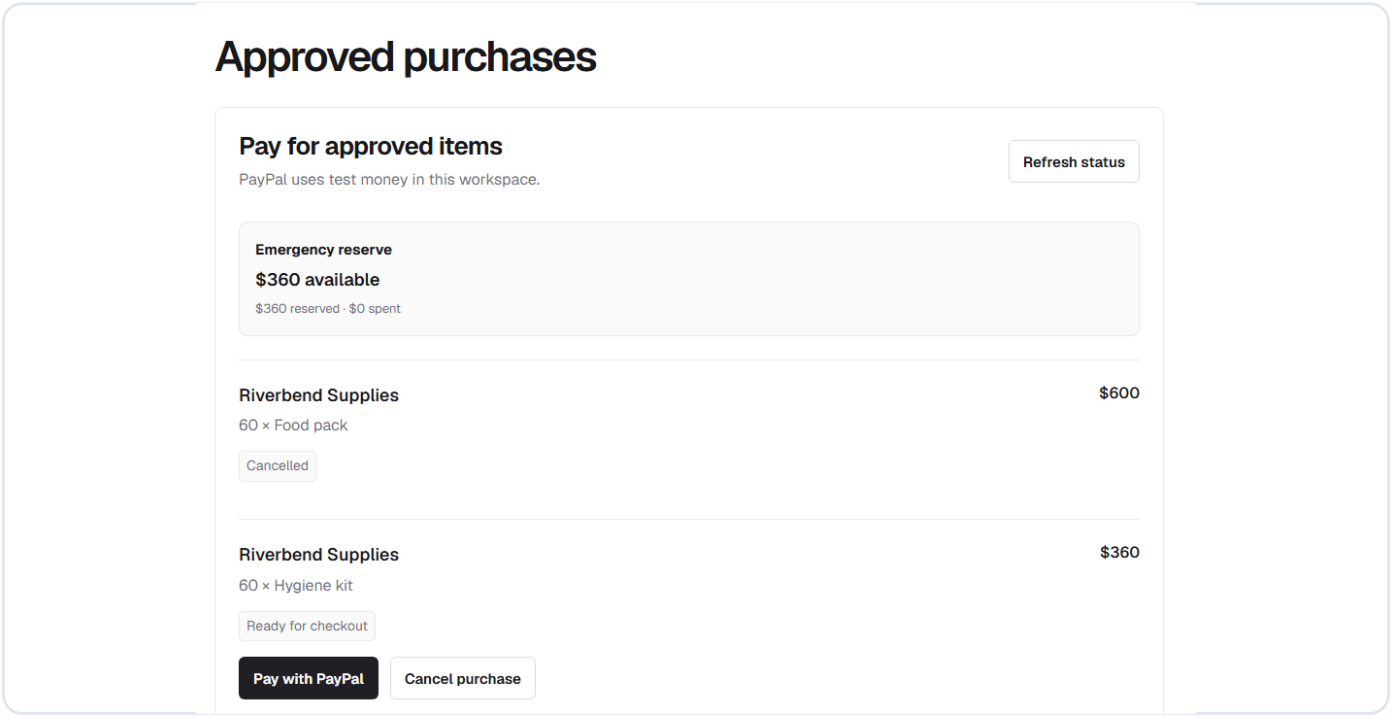

01 WHAT IS DONE NOW

Signed-in workflow evidence

Fresh screenshots from the local browser suite. Account, database API and provider responses in these screenshots are test fixtures.

04 / Grant review shows the source quote and confirms the grant was added only after review.

05 / Purchases shows reserved funding, an unsubmitted purchase marked Cancelled, and a remaining item ready for checkout.

02 WHAT NEEDS TO BE DONE FOR THE SUBMISSION

Finish these today

Official cutoff: **Nov 12 at noon PST / Nov 13 at 1:30 AM IST**. The report is for preparation. Devpost requires the working project, description, repository and video.

01

Prove the full hosted workflow

Use a fresh test account on the hosted app. Save a fictional operation, upload a new grant and confirm the quote and funding. Approve a plan, then use a separate PayPal sandbox buyer to complete checkout and capture. Verify the app shows **Paid** and the ledger moves reserved funds to spent. Test refund and signed delivery if you intend to demonstrate those features.

02

Choose the release and make judge access work

Render currently runs **6836b46**. Merge and manually deploy the tested **01b01e5** changes if the in-app confirmations should appear in the demo. Use a clean browser to confirm the public sample and give judges working instructions for the signed-in AI and sandbox payment flow. Use dedicated demo credentials if login is required. Keep provider secrets private and keep access available through judging.

03

Record and upload the demo

Record a video under **3 minutes** and publish it publicly on YouTube. Show the grant quote and confirmation, a supplier change and revised plan, then the approved purchase and a successful sandbox payment if verified. Use only footage and audio you have permission to use.

04

Complete the Devpost entry

Add the public demo URL, public GitHub repository with its MIT license and setup instructions, and YouTube link. Write an English description explaining who it helps, what works, and how PayPal Sandbox and Groq are used. Credit AG Grid for the offers table and Render for hosting. Submit today and check that Devpost shows the entry as submitted.
